TECHNICAL PROJECTS (See all projects on elsonmathew.herokuapp.com)

Foodster — *Restaurant Review Application*

A restaurant review application, much like Yelp, that integrates with the Google Maps API and includes features like user login, user comments, star ratings, image uploading, and user authentication. Powered by the Ruby on Rails framework and launched on Heroku

Coder Project — *Learning/Teaching Platform*

An intuitive, two-sided video-streaming marketplace platform that features credit card payment capabilities, user role management, complex user interfaces, intricate user authentications and validations, and advanced database relationships.

Grammables — *Photo share Social Media Platform*

A mobile first, photo-sharing app created on the Rails framework primarily through Test Driven Development (TDD) following numerous red/green/refactor cycles. Grammables was built with you in mind, so please feel free to add and update from all your travel adventures.

Finisher — *Things To Do Application*

A single page to do application that utilizes a fluid interface by harvesting the power of JavaScript in the Rails framework.
